

Indication

EVENITY[®] is a prescription medicine used to treat osteoporosis in women after menopause who are at high risk of fracture, or cannot use another osteoporosis medicine or other osteoporosis medicines did not work well.

Here are some key reasons why you may be interested in EVENITY[®], and important topics to discuss further with your doctor:

1 Osteoporosis is a progressive disease.
You may not realize just how much it has progressed until you break a bone. What's more, **2 out of 3 women with postmenopausal osteoporosis at high risk for fracture will break a bone in their lifetime.** That's why it's important to not put off treatment.

2 EVENITY[®] is the first and only osteoporosis treatment that works in 2 ways.
It both builds new bone and, to a lesser extent, slows down bone loss.

**3 You could start building bone quickly—
EVENITY[®] helps build new bone in just 12 months.**

It's just 1 doctor visit per month, for just 12 months.

Each dose of EVENITY[®] is 2 shots given by your healthcare provider at the same appointment.

You should take calcium and vitamin D as your doctor tells you to while you receive EVENITY[®].

After 12 months, women on EVENITY[®] significantly reduced their risk of spine fracture by 73%.

Women receiving EVENITY[®] had fewer new spine fractures (0.5%) than women receiving placebo (1.8%) at 12 months.

This study followed over 7,000 women with postmenopausal osteoporosis receiving EVENITY[®] or placebo (a treatment without medicine) for 12 months.

➤ EVENITY[®] is covered by most insurance, including Medicare and many commercial plans.

Individual out-of-pocket costs will vary. Talk to your insurance provider to determine what you will pay for EVENITY[®].

Important Safety Information

What is the most important information I should know about EVENITY[®]?

EVENITY[®] can cause serious side effects, including increased risk of having a heart attack, stroke, or death from a cardiovascular (heart or blood vessel) problem. Call your healthcare provider or get emergency help right away if you have any of these symptoms: symptoms of **heart attack**, which may include: chest pain or pressure; shortness of breath; feeling light-headed or dizzy; or symptoms of **stroke**, which may include: headache; numbness or weakness in face, arm, or legs; difficulty talking; changes in vision or loss of balance. Before you receive EVENITY[®], tell your healthcare provider if you have had a heart attack or stroke, especially if it has happened in the past year.

Please see additional Important Safety Information on next page.

Important Safety Information

What is the most important information I should know about EVENITY®?

EVENITY® can cause serious side effects, including increased risk of having a heart attack, stroke, or death from a cardiovascular (heart or blood vessel) problem. Call your healthcare provider or get emergency help right away if you have any of these symptoms: symptoms of **heart attack**, which may include: chest pain or pressure; shortness of breath; feeling light-headed or dizzy; or symptoms of **stroke**, which may include: headache; numbness or weakness in face, arm, or legs; difficulty talking; changes in vision or loss of balance. Before you receive EVENITY®, tell your healthcare provider if you have had a heart attack or stroke, especially if it has happened in the past year.

Do not receive EVENITY® if you: have low blood calcium; or are allergic to romosozumab or any of the ingredients in EVENITY®.

Before receiving EVENITY®, tell your healthcare provider about all your medical conditions, including if you:

- have a history of other heart or blood vessel problems
- have low blood calcium
- cannot take daily calcium and vitamin D
- have kidney problems or are on kidney dialysis
- plan to have dental surgery or teeth removed

What are the possible side effects of EVENITY®?

EVENITY® may cause serious side effects, including:

Serious allergic reactions have happened in people who receive EVENITY®. Call your healthcare provider or go to the nearest emergency room right away if you have any symptoms of a serious allergic reaction including: rash; hives; swelling of the face, lips, mouth, tongue, or throat which may cause difficulty in swallowing or breathing.

Low calcium levels in your blood (hypocalcemia). EVENITY® may lower the calcium levels in your blood. Your low blood calcium should be treated before you receive EVENITY®. Call your healthcare provider if you have symptoms of low blood calcium such as: spasms, twitches, or cramps in your muscles; numbness or tingling in your fingers, toes or around your mouth.

Severe jaw bone problems (osteonecrosis) may occur. Your healthcare provider should examine your mouth before you start EVENITY® and may tell you to see your dentist. Ask your healthcare provider or dentist about good mouth care.

Unusual thigh bone fractures. Symptoms of this type of fracture include new or unusual pain in your hip, groin, or thigh.

The most common side effects of EVENITY® include joint pain and headaches.

These are not all the possible side effects of EVENITY®. Call your doctor for medical advice about side effects.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.

Please see EVENITY® full Prescribing Information, including Medication Guide.
